

Claims

1

2

3 1. A method for operating a pipelined microprocessor, said method in-

4 cluding steps for

5 detecting a first instruction that stores to a first memory location, said first

6 instruction including syntax for computing an effective address for said first memory lo-

7 cation;

8 detecting a second instruction that stores to a second memory location, said

9 second instruction including syntax for computing an effective address for said second

10 memory location;

11 determining, in response to said syntax for said first instruction and said

12 syntax for said second instruction, a relationship between said first memory location and

13 said second memory location, without computing said effective address for both said first

14 memory location and said second memory location; and

15 determining whether to perform one of said first instruction and second in-

16 struction in response to said step of determining a relationship.
